Customized, Global, IT Services for Your IT Needs.

Curvature's IT Services offers a range of strategic, operational, and optimization services focused on:

Cloud Advisory

Focuses on cloud enablement and cloud transformation. Enablement centers on cloud adoption at scale with shorter time to service, reducing risk, and eliminating unforeseen issues. Cloud Transformation is the planning and implementation of a cloud roadmap to realize results. For both, we enable a workload placement assessment to determine the optimal place to run workloads.

Cloud Migration and Hybrid IT

Curvature takes a structured approach to Digital Transformation, with a comprehensive current state infrastructure and application discovery, workload placement assessment, transformation roadmap, and future state architecture. We also look beyond the technical changes, to assess the impact to IT operations and resource skill sets required to support your transformed environment.

Staging and Deployment

Leverage our global distribution and service centers to securely store, configure, test, and ship IT assets worldwide. This is complimented with our field engineering resources to install devices on a global scale, such as SD-WAN, security appliances, or for server, storage, or network refreshes.

Physical Data Center Relocation

Curvature provides turn-key solutions for physical data center relocations, from basic asset moves to full end-to-end white glove service, anywhere around the globe.

Cloud Spend Optimization

Uses a combination of tools and architecture reviews to identify, target, and eliminate unnecessary cloud costs. Most clients see a 30% reduction in cloud spend, with our programmatic approach that minimizes risk and delivers tangible results.

IT Asset Management

Capitalize on our people, process, and technology to build enterprise-level IT Asset Management (ITAM) solutions. We leverage a powerful ITAM SaaS platform that is rich with features, flexible licensing options and is a great value compared to other ITAM products. Combined with our ITAM experts and development framework, we can customize a solution to meet the requirements of any size organization.

Wireless Transformation

Leads organizations through our end-to-end process that includes wireless site surveys, wireless design, staging, structured cabling, installation, and asset decommission, on a global scale, giving you a single vendor solution.

Data Center and Cloud Migration

Whether moving to a new colocation data center, or need to consolidate multiple data centers, Curvature's battle-tested migration methodology and team of migration experts not only develop the strategy and future state architecture, we can also execute the migration.

IT Discovery

An all-encompassing, manufacturer-independent solution that leverages intelligent auto-discovery to collect detailed information across applications and IT infrastructure (compute, VM, cloud, storage, network, and end-user devices). Creating a baseline sets the groundwork for a number of IT initiatives, such as validating your CMDB, merger or acquisition integration planning, security assessment, cloud strategy, and many other projects.

IT Asset Disposition

Our comprehensive IT Asset Disposition (ITAD) service includes all computing devices from large mainframes and storage arrays to end-user devices like phones and PDAs. We offer secure onsite or offsite data erasure, drive destruction, equipment recycling, and hardware resale, backed by ISO 14001 and R2 certifications.

Staff Augmentation

Curvature provides a full range of global IT staffing services for technical positions, from field engineers for data center infrastructure support to server/virtualization, storage, and network engineers to DBAs.

Remote Hands

Provides organizations with an on-demand dispatch model of experienced technical resources when and where needed, globally, to perform a variety of IT infrastructure related tasks in your data centers and remote locations.

Strategy Workshops

Major IT transformation programs require business cases and significant investments in budget, time, and resources. For most organizations, this is a once in a lifetime endeavor, and figuring out where to start is hard.

Our Strategy Workshops are 2-week engagements designed to kick-start digital transformation and other IT initiatives with clear, actionable outcomes.

Our onsite workshops which include surveys, consensus building and defining outcomes, consist of the following:

Workshop Activities	Workshop Deliverables
• Surveys of current business and IT stakeholders • Key focus goals • Application and infrastructure reviews • Discussion of potential cloud platforms • Consideration of hosting models • Planning, prioritization and goals	• Initial Roadmap - major milestones and timeline • Program estimates (budget) and resource requirements • Strategic approach for digital transformation • Governance concepts • Technology POC/pilot recommendations

Workshop Type	Description
Cloud Strategy	For organizations that need to develop or refine a cloud strategy and roadmap that identifies cloud-native platforms and technologies, program structure and measurable milestones to accelerate a Cloud Transformation program.
Workload Placement	This workshop defines the selection criteria (costs, security, compliance, latency, etc.) for the optimal placement for your applications and services, develops a decision tree and scoring matrix, and takes three to four workloads through the process.
Cloud Migration and Transformation	Cloud Migration and Transformation is a "readiness" workshop to illustrate the data elements, analysis and planning process by utilizing best practices to develop a plan for a successful transformation and/or migration. The workshop will demonstrate the requirements for building an iterative transformation roadmap to accompany a migration plan.
Cloud Spend Optimization	Our workshop and proof of concept for cloud cost optimization will develop a program to eliminate waste from existing public cloud environments and deploy a proof of concept project to identify and measure opportunities for savings.
Data Center Consolidation/Migration	This workshop uncovers the current state of your infrastructure and applications, and develops a strategy roadmap to consolidate and optimize your digital infrastructure.
Hybrid IT/Digital Transformation	This workshop focuses on developing a plan to align business and IT goals. Through a combination of architecture development, application roadmaps, SaaS capabilities and other technology options to transform IT's portfolio of services.
Data Infrastructure Management	This workshop will identify the cost savings and pricing models available, risks and key services that your organization should consider when exploring managed services options for network, compute, storage and/or cloud environment.
IT Asset Management	This workshop helps organizations understand how an ITAM program can address security, compliance and quickly handle internal or external audit requests to drive cost savings.
Colocation Data Center Selection	Thinking about going from an on-premises data center to colocation, or switching colocation providers? Our colocation selection workshop helps jump start the process of gathering needed data.
